

TS220 TurfSavr™ HD Renovator

TurfSavr does just what the name implies. Slice, dethatch, overseed or fertilize to renovate and beautify a 22" wide path in a single pass. Powered by a Honda OHV engine, there is plenty of power to slice or dethatch deeply in all types of soil and turf conditions. The self-propelled hydrostatic drive, oversized 13" x 5" pneumatic rear tires, ergonomic handle and weight-balanced design reduces fatigue and increases productivity even in heavily landscaped conditions. With 1.6" blade spacing, TurfSavr slices up to 20% more turf than comparable models to increase seed penetration and germination. Use without the seed box for slicing only or install the TS010 flail blade for aggressive dethatching action.

TurfSavr has a factory installed quick release receiver hitch to allow attachment of the optional PL050 StepSavr.

Easy Adjustment Between Slicing Heights

See Optional PL050 StepSavr on Page 14

Save time, save money, save steps with a StepSavr.™

Heat Treated High-Carbon Steel Renovation Knives Standard

Optional TS010 Flail Blade Assembly

Model Number	TS220
Renovation Width Per Pass	22"
Approx. Knife Spacing	1.6"
Number of Knives	13 (8 teeth per blade)
